## Color Palette

For our project the color palette is intended to be simple and scarce in order to not have the user overwhelmed upon navigating the app. White is dominating, for buttons we used a darker coral blue, text boxes are a lighter gray and the pictures are drawings that don't have very strong colors, as to make things simpler.

Fonts

As far as fonts are concerned, simple way the way to go for us. We used Pattaya for the application name and variations in boldness of Inter for the rest of the text.

Icon styles

For icons we used simple pictures, colors and forms as to make the user feel at ease. The buttons are rectangles with rounded corners. There is however a red button that is used by the psychologist to declare that there is a risk of a burnout. The icon of the app is a text written in Pattaya font. There is a REMINDER icon that appears in case of an imminent meeting. Profile pictures are rounded, no matter the user. We also have a couple of sliders that have different colors, as to distinguish them since they are on the same page.
